Process for Staking

Process for Borrowing

BUY TLN GOLD

01

or

**STAKE & GET
TLN GOLD**

02

BURN TLN GOLD

03

GET v\$ LOAN

04

TLN GOLD Market Price

If TLN GOLD Does not need paid back

Why is the sweet spot 30c for 2:1 users

Why is the sweet spot 30c for 4:1 users

Price Drivers

ISSUANCE
RATE
150X

No risk staking
Increase excitement
Increase staking

Increase buy pressure
Increase Liquidity
Increase Momentum

BOOSTER RATE
2X / 4X etc

Increased belief
Increased demand
Increase locked VOW

What could go wrong?

No staking	No TLN Gold Distributed	Price of TLN goes up as burned
TLN Price goes down	Its free money anyway (LPs are safe)	No Problem
BTC / VOW Goes Down	In the end this belief is important	Staker must want to HODL
No demand for Boosters	Price Goes Down, staking isnt as attractive	Borrowing demand goes up
Not enough TLN Gold	Price Goes Up and staking must happen	Increased demand to stake
No Staking & No Borrowing	TLN Gold price stays the same	No problem
No referrals	No Staking	No market momentum
v\$ price stays low	Loans dont clear	Staking increases price.
VOW whales dump	VOW, v\$ drop (TLN Gold price rises v V\$)	More incentive to stake
